

NairaPlate for Food Business Owners

Know your profit. Stop leakage. **Run with confidence.**

What NairaPlate does for you

NairaPlate is built for owners of bukas, restaurants, bakeries and caterers in Nigeria. It helps you:

- See exactly how much you made today and what your profit is.
- Find out where cash or food is disappearing.
- Price your dishes and buy ingredients with confidence.
- Give your accountant clean records without stress.

Unlike generic POS apps, NairaPlate adapts to your size:

Buka profile

Simple 4-button view for small kitchens.

Restaurant profile

Full control and insight for busy restaurants.

Full Suite

Advanced diagnostics and reports for serious operators.

Everyday problems we solve

"I don't know if I really made money today."

"Cash is short but I can't see why."

"Prices keep changing and I'm selling at the wrong margin."

"My staff can override prices, give discounts or void sales."

"My accountant struggles with my records at month-end."

"I run a small buka and most systems are too complicated."

NairaPlate is designed around these realities, with Nigerian cash flows, market purchases and network issues in mind.

How NairaPlate helps you day to day

1 Simple daily overview

Today's Cash & Sales

See total sales, cash in hand, transfers and basic profit in one screen.

Things to check

- Paper sales waiting for your approval.
- Cash payout requests (market run, fuel, transport).
- Major cash shortages or overages.

Print daily summary

One-tap printable end-of-day slip/PDF for your records or physical book.

2 Tight control over cash and staff

- Shift-based cash drawers with opening float and closing counts.
- Automatic detection of cash short/over and alerts to you.
- Cash paid-out for market runs, fuel, transport and supplier payments.
- Owner approval for payouts, refunds and sensitive actions.
- Role-based access and PIN login for staff on shared devices.

Result: Fewer unexplained shortages and clearer accountability by shift and staff.

3 Know your real food cost and margin

- Recipe costing with plate-level cost and target margin.
- Batch logging with actual portions produced.
- Wastage logging for spoilage, over-cooking and other losses.
- Automatic impact on your food cost and margin reports.

"Why did my margin change?" (Restaurant/Full Suite)

In plain language, you see the main reasons your margin moved, for example:

- "Your purchase price for oil and tomatoes increased this week."
- "You sold more low-margin dishes and fewer high-margin dishes."
- "Wastage for rice and stew increased."

Result: You know which dishes really make money and where your profit is leaking.

4 Purchases, suppliers and customer credit

- Record market and supplier purchases with ingredient-level detail.
- Supplier ledger showing what you owe, payments and advances.
- Customer credit (tabs) for approved customers, with repayment tracking.
- Optional receipt photo capture for purchases and payouts (on request).

Result: You can manage supplier debt, customer tabs and ingredient costs without guesswork.

5 Accountant-ready records

Clean CSV exports for your accountant, including:

Sales Day Book

Cash Drawer Summary

Cash Paid-Out Register

Supplier and Customer Ledgers

Refund & Reversal Register

Wastage & Batch Report

Amounts appear as plain numbers (e.g. 1450.00) with matching kobo columns, so your accountant can sum and pivot easily.

Result: Month-end, tax and audit preparation become faster and more reliable.

Why owners choose NairaPlate

- **Built for Nigeria:** handles cash-heavy operations, market purchases and unstable networks.
- **Simple for small kitchens:** Buka profile gives you just 4 essential oversight buttons.
- **Powerful for bigger restaurants:** full control, diagnostics and reports when you need them.
- **Clear and honest:** plain-language reports that tell you what changed and why.
- **Audit-ready:** clean exports and receipt evidence your accountant can trust.

Typical customers

- Small bukas and canteens that want simple daily control.
- Mid-size restaurants that need serious margin and cash insight.
- Caterers and bakeries that manage batches, recipes and customer credit.
- Multi-outlet operators who want consistent controls and central oversight (future).

Getting started

- 1 We set your kitchen profile (Buka, Restaurant or Full Suite) based on your size.
- 2 We configure your menu, recipes and basic settings with you.
- 3 Your staff start using the till; you start using the daily summaries.
- 4 At month-end, you or your accountant download the CSV reports.

If you'd like, we can run a 2 to 4 week pilot in one outlet before rolling out more widely.
